**What is DMIT (Dermatoglyphic Multiple Intelligence Test)?**

The Multiple Intelligence Testing theory was propounded by Prof. Howard Gardener. This test is based on pure & comprehensive Genetic research. This is a **scientific study of fingerprints** that helps individuals understand their inborn intelligence distributions. Our fingerprint patterns are uniquely intertwined with our genetic composition & central Nervous system. Henceforth, the scientific study of fingerprints helps in discovery of the Hidden Talents & Inborn Potentials in a Human Being.

**DR. HOWARD GARDENER**

**Dr. Howard Gardner** of Harvard University has proved by his research and theory that everyone is intelligent in at least eight different ways and can develop each aspect of intelligence to an average level of competency. He said that only IQ is not enough to judge a child, because there are so many things beyond IQ. According to his Multiple Intelligence Theory, there are reflection of 9 types of intelligences work in human brain. Different type of intelligences are controlled by the different parts of our brain.

**RELATION BETWEEN BRAIN & FINGERPRINTS**

Intelligence of a human depends upon the neuron distribution in brain. Neuron distribution takes place at the time of development of human brain and fingerprints in 13 – 21 weeks during pre birth stage in mother's womb. The development time of fingerprints and brain are same, there are co relation between hand fingerprints and brain. Type of fingerprint of human being reflects the structure of neuron distribution in brain.
